

MASTER FREELANCER REQUIREMENT SPECIFICATION BRIEF (v3)

Target Platform: WordPress + ListingPro Theme Engine | **Target Server:** Hostinger India
Design Theme Reference: Indian Justdial Layout Replicas (Mobile & Desktop Split-Grids)

Project Overview:

The freelancer must configure a highly responsive, multi-category local directory website using the legally provided **ListingPro** theme framework. All front-end interfaces, page grids, colors, and content structures must be fully customized using **Elementor** to perfectly match the user experience of the Indian **Justdial** smartphone application and desktop system. No raw theme code customization is allowed; everything must be built through visual layout configurations so the administrator can manage content text fields easily later with no IT background.

1. CORE USER INTERFACE (UI) & JUSTDIAL BRANDING BRICKS

A. Mobile Smartphone Layout

- **Pinned Top Header:** Flat-white static header pinned to the top of mobile screens.
- **Dual-Box Search Integration:** Left side handles automatic browser location targeting or text inputs (e.g., Udupi, Manipal, Malpe). Right side displays a rounded rectangular keyword lookup container reading 'Restaurants near me' or 'Search for services...'.
- **Horizontal Sticky Category Tabs:** A swipeable horizontal icon-text ribbon immediately under the search bar acting as rapid jump links to category containers.
- **2-Column Capsule/Pill Button Grid:** The primary homepage body must display micro-services in a clean 2-column matrix of rounded capsule outline borders with matching vector line icons.
- **Pinned App Bottom Footer Bar:** A fixed navigation bar at the absolute bottom of phone viewports mapped to display: *Home* | *Search/B2B* | *News/Feed* | *More*.

B. Desktop Monitor View Layout

- **Horizontal Multi-Box Search Grid:** Render side-by-side location and keyword lookup frames integrated into the horizontal top hero segment.
- **8-Column Multi-Row Grid Layout:** Automatically reflow and expand the mobile capsule cards out into an elegant 8-column wide container box layout on laptops.
- **Sub-Category Content Buckets:** Group secondary niches into distinct white background panels (e.g., 'Wedding Requisites') carrying bold headers and sub-category picture boxes below.
- **Right-Edge Sticky Visual Triggers:** Attach vertical floating tabs fixed to the right side of screens reading '**Advertise**' (Vibrant Orange) and '**Free Listing**' (Bright Blue) routing straight to the sign-up workflows.
- **Global Color Profile:** Match all visual elements, accent text lines, search lines, and mouse hovers to **Justdial's** official Bright Blue (#0055FF) and Orange (#FF6600).

2. MULTI-LEVEL CATEGORY & SERVICE DIRECTORY TREE

Configure a seamless 3-layer relational taxonomy structure for the coastal Karnataka student and tourist demographic across these exact fields:

Main Category	Sub-Category Capsule Fields (2-Column Pill Target)
Food & Dining	Pure Veg Restaurants, Non-Veg Dhabas, Cafes, Biryani Houses, Ice Cream Parlours, Home Kitchens & Home-Cooked Food Deliveries
Property & Rentals	Rent Houses, Student PGs & Hostels (Targeting Manipal MIT/MAHE clusters), Flats & Apartments for Lease, Commercial Shops, Real Estate Brokers
Daily Needs & Utilities	Electricians, Plumbers, Laundry & Dry Cleaning, AC Repair, Carpenters, Pest Control, Appliance Technicians, Packers & Movers
Medical & Healthcare	General Physicians, Dentists, 24/7 Pharmacies, Diagnostic Labs, Ayurvedic Clinics, Local Home Nursing Care
Travel & Logistics	Car Rentals, Two-Wheeler/Scooter Rentals (Manipal Student Bike Fleets), Auto-Rickshaw Call Links, Local Taxi Services, Garages, Towing Services
Weddings & Local Events	Kalyana Mantapas (Wedding Halls), Event Decorators, Local Photographers, DJ Sound Providers, Outdoor Caterers

3. ADVANCED BUSINESS LOGIC, HOMEPAGE AD PLACEMENTS & REVENUE ENGINE

- **Lead Hiding Matrix (Strict Free Tier Limits):** Natively lock and **completely hide the 'Call Now' and 'WhatsApp' touch communication paths on the Free Plan package.** These fields must only unlock dynamically when a merchant account updates to a Paid Plan subscription package.
- **Single Profile Image Hardlock:** Free package registrations are strictly restricted to uploading **exactly one image file** (store icon or basic logo). Multi-image galleries, video containers, and header canvas backdrops are completely disabled for the Free tier.
- **Automated Homepage Banner Ads Carousel:** Build a dedicated, compact rotating banner slider at the absolute top of the homepage grid (positioned directly under the main location lookup layout). Premium vendors must be able to buy this slot on a Pay-Per-Day basis from their dashboard using automated systems.
- **Homepage Embedded Video Advertisement Segment:** Configure a dedicated, responsive video display block placeholder on the main homepage body where paid commercial loops can execute natively via YouTube streaming sources.
- **Behavioral 'Featured Listings' Layout Showcase:** Activate a premium homepage listing slider that dynamically filters and highlights business cards based on live user search behavior and category demand trends. **Only Premium Paid accounts qualify to appear inside this featured loop.**
- **Conversion-Optimized Vendor Signup Box:** Create a prominent, visually engaging call-to-action banner container on the home screen reading: *'Grow Your Local Sales — List Your Business for FREE Today!'* with a clear button pointing straight to the OTP login sequence.
- **'Order Online' Food Portal Bottom Sheet:** For food/restaurant segments, implement an 'Order Online' primary action block. When tapped, it must slide open a clean bottom modal popup showcasing official brand graphics and redirect links for **Swiggy** and **Zomato** apps drawn from back-end user URL strings.
- **Social Media & Walkthrough Embed Engines (Premium Only):** Provide paid accounts with text input slots to embed responsive YouTube promotional loops and Facebook Watch / Instagram Reels promotional clips displaying custom video thumbnails.

- **The 'Claim Your Listing' Growth Magnet:** Pre-loaded standard business numbers must show a flashing '*Is this your business? Claim it now!*' trust badge, prompting owners to verify credentials and upgrade to paid plans to reveal their blocked contact buttons.
- **WhatsApp Auto-Lead Notification Forwarder:** Configure background metrics to send a text alert via WhatsApp API directly to premium owners whenever a customer clicks their page, boosting client retention rates.

4. DATA COMPLIANCE, SECURITY & GLOBAL MANUAL APPROVAL QUEUES

- **Mandatory Verification File Gateway:** Add an absolute required document upload attachment module to the listing registration page titled '**Upload Trade License / FSSAI / KMC Registration Certificate**' supporting JPEGs, PNGs, or PDFs.
- **Global Manual Review Safety Queue (Anti-Switch Trick Control):** To protect platform intermediary immunity under **Section 79 of the Indian Information Technology Act, 2000**, configure a global lock rule. **ALL new signups and any future edits made by existing vendors** (such as changing phone lines, modifying categories, updating description text, updating background banner advertisements, or altering YouTube embed links) **must instantly unpublish the updates and route the profile into a private 'Pending Review' admin queue**. The public frontend site must continue to display only the old, verified information safely until the primary Administrator manually inspects the new documents and clicks '**Approve**'.
- **Automated Subscription & Document Expiry Triggers:** Set up the system tracking calendar to monitor plan lengths and government license dates. The framework must automatically trigger email alert templates before run-out dates and auto-suspend listing visibility if updates are skipped.
- **Mandatory Footnote Legal Policies Pages:** Deploy clear, text-rich static pages in the main footer map covering a comprehensive *Website Disclaimer* (enforcing a Three-Possibility Rule for medical profiles and forcing visitors to double-check labels), a secure *Privacy Policy* detailing collected mobile OTP registers and GPS logs, and a *Business Terms of Use* detailing complete vendor liability. Publish a clear, mandatory ****Grievance Officer**** clause ('legal@yourdomain.in') for instant takedown requests.

5. SYSTEM INTEGRATIONS, GATEWAYS & ESCROW PROTOCOLS

- **10-Digit Mobile Number OTP Authentication:** Fully integrate the free **Google Firebase Phone Authentication** portal. Traditional email registration must be disabled; users and merchants must register and log into their secure personal dashboards exclusively using standard Indian mobile phone SMS codes.
- **Razorpay Payments Pipeline:** Link domestic **Razorpay API credentials** to process automated subscription checkouts via local UPI channels (GPay, PhonePe, Paytm), Indian NetBanking, and credit/debit card matrices directly into my bank account.
- **Hostinger Server Compatibility:** All structural elements must be configured cleanly within Hostinger's native database environment without changing core layout source programming files, ensuring seamless functionality alongside Hostinger's 24-hour automated snapshot data backups and one-click maintenance patches.
- **Escrow Shield Milestone Release Condition:** Project funding will remain 100% locked inside the platform's escrow holding facility. **No milestone funds will be disbursed upfront**. Final project release will execute exclusively after the Administrator logs in from a standard mobile device, validates a successful mock user OTP registration, tests a vendor trade license document upload, and confirms the Justdial-style UI clone scales across mobile and desktop views perfectly without hanging or server lag.
